Not illustrated. 1909 Excerpt: .were attempts to increase the natural depth on such bars by means of spur jetties or training walls, composed of piles and hurdles, designed to locally contract the flow and cause lateral deposits; but the great improvements in dredges of late has tended to cause a resort to that method in preference. When a river brings down large quantities of drift logs, to become snags or so-called sawyers, serious obstruction to navigation results; and the Government has expended large sums for their removal by boats equipped with special machinery for this purpose. Where the banks admit of erosion by river currents, extensive caving Lecture delivered before engineer students in the post-graduate courses, George Washington University, March 17, 1909. especially in bends occurs, tending to obstruct the channel; to prevent this, bank revetment by brush mattresses, supplemented by hydraulic grading to form suitable slopes, has often been...
